The Healthy Interiors Goal requires participating hospitals to ensure that 30 percent of the annual volume of furnishings and furniture purchases (based on cost) eliminate the use of formaldehyde, perfluorinated compounds, polyvinyl chloride (PVC), antimicrobials, and all flame retardants. Via, Inc. products ordered with one of the HH compliant textiles meet the following product attributes:

1. FORMALDEHYDE

New furniture and furnishings must be tested in accordance with ANSI/BIFMA Standard Method M7.1–2011. Comply with ANSI/BIFMA e3-2011 Furniture Sustainability Standard, Sections 7.6.1 and 7.6.2.

2. PER- AND POLY-FLUORINATED COMPOUNDS (PFCS)

Products supplied must not use stain or water-repellant treatments that contain a PFC, including perfluoroalkyl or polyfluoroalkyl substances, fluoropolymers, perfluoropolyethers, or side-chain fluorinated polymers.

3. POLYVINYL CHLORIDE (PVC)

Products supplied must not contain polyvinyl chloride (PVC), or vinyl.

4. ANTIMICROBIALS

Products supplied must not contain triclosan and triclocarban. No other added or built-in chemical antimicrobials are allowed unless they are registered with the U.S. EPA under the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA), and have published data that show efficacy in a hospital/clinical setting measured by a reduction in healthcare-associated infections (HAIs).

5. FLAME RETARDANTS

Products supplied must contain less than 1000 ppm of intentionally added flame retardants by weight of the homogeneous material where code permits. When flame retardant chemicals are necessary to meet code requirements, use chemicals that meet GreenScreen Benchmark 3 or 4 or their equivalent.

Furniture/fabric/products described herein meets the Healthy Interiors goal of the Safer Chemicals Challenge according to the manufacturer. Practice Greenhealth does not verify this information.
